

Dolphin Starter to Infinity Family or Elite

The Dolphin Starter to Infinity or Elite kit (K-DSS-1) contains:

- Adapter cable with locking mini BNC connection on one end and locking BNC connected to a phone plug on the other
- Black holster which mounts on a microphone clip on the Infinity or Elite
- 1.5-inch square piece of hook and loop fastener for use if your Infinity or Elite only has one microphone clip

If your start system has two microphone clips:

Use the right microphone clip to hold the microphone, and the left to mount the Dolphin holster, as shown in Figure 1.

Figure 1: Infinity with holster

Figure 2: Infinity with Dolphin Starter in holster

Attach the cable and adapter between the Dolphin Starter and the Start Output jack on the start system. **NOTE:** you must **unlock** the locking mini BNC connector when disconnecting from the Dolphin Starter or you will damage your cable.

If your start system has only one microphone clip:

Peel the back from the prickly side of the hook and loop fastener and stick it on to a flat portion start system. For infinity start systems stick it to the flat space under the handle as shown in Figure 3. Peel the backing from the soft side of the hook and loop fastener and stick it to the back of the Dolphin Starter (Figure 4), making sure not to interfere with opening the battery cover.

Figures 3 & 4: hook and loop fastener on Infinity and on Dolphin Starter

Attach the adapter cable between the Dolphin Starter and the Start Output jack on the start system.
